Subject: Update from TCEQ DW Director Linda Brookin on West Texas DW Response

Talked with Linda just a few moments ago. No EPA DW assistance needed at this time. West receives their water from the City of Waco. The aboveground tank in West is in good condition and the City is keeping it filled. There was damage to some of the distribution lines from the aboveground tank; however the City isolated and cut off those lines in order to keep the proper pressure in the lines. There will be a boiled water notice (media should be getting this information soon).

TCEQ also looked at the aquifers and don't believe there is an impact based on the formations that are used as a source for drinking water.

Linda also mentioned that there is tons of air monitoring being conducted, but she doesn't know the results of this information. However, she indicated that TCEQ's emergency response contractors are working with EPA's response team.
